I AM A DALEK

An ancient Dalek buried beneath rural England awakens, infecting humanity itself. As Rose struggles to save a woman transforming into a monster, the Doctor faces extermination.

BBC Books
Published: May 2006

The Doctor and Rose Tyler prepare for a walk on the Moon. After donning spacesuits, the Doctor reduces the gravity inside the TARDIS so Rose can adjust to her lighter weight on the lunar surface. An excited Rose leaps through the TARDIS doors only to find herself in a small village pub. The Doctor is immediately concerned: "I checked all the controls as we were coming in, and we were definitely heading for the Moon." He returns to the TARDIS to carefully examine the readings.

It's morning, and the pub has yet to open. Alone, Rose idly flicks through a newspaper. She is stunned when she finds a story with the headline 'Roman Remains found at Crediton Vale'. Beneath it is a photograph of an ancient Roman mosaic containing an image of a Dalek. Rose runs towards the TARDIS to tell the Doctor but its door suddenly slams shut. The TARDIS fades away in front of her. Rose removes her spacesuit and climbs out of the pub through a window. She finds herself in the village of Winchelham.

She stares at her TARDIS key, hoping it will glow and signal the Doctor's return.

Meanwhile, Kate Yates reluctantly gets out of her bed and prepares to go to her dull job at a call centre. After a failed attempt to start a business in London, she has been forced to move back in with her parents in Winchellham. Rushing across the road to catch a bus, Kate is hit by a car. Rose, who witnesses the accident, races to her aid, but she can see that Kate's injuries are very serious and will most likely be fatal. Rose tries to comfort Kate. She is shocked when Kate is briefly enveloped in a strange green energy field. Kate's hair changes from curly red to straight blonde. She stands up, her wounds completely healed, and casually walks away.

The TARDIS has brought the Doctor to an underground nuclear bunker a few miles away at Crediton Vale. He meets Frank Openshaw, the archaeologist who is directing a dig. The workers at the site are students from a local farming college. The Doctor calls Rose and tells him to join him, ending the call before she can tell him about the Dalek and Kate.

The Doctor is shocked to find that the students have uncovered the ancient remains of a Dalek buried in the ground. Aware that they probably won't believe the truth, the Doctor tells them that it is an unexploded bomb to get them to leave. Frank remains with him, however he suspects that the Doctor is far more than he first appears.

Kate sits in a tea shop. The local newspaper's crosswords and sudoku puzzles seem childishly easy to her now. Rose approaches and tries to make her understand that something strange has happened to her. Kate has no interest in Rose or what she is saying until she mentions the Doctor. The name triggers a burst of anger and fear deep within her. Kate agrees to go with Rose to find the Doctor. The word "exterminate" begins to echo through her mind.

The Doctor carefully examines the Dalek, which appears to be dead. He removes its gunstick and gives it to Frank, instructing him to keep it hidden from the authorities. The Doctor decides to trust Frank with the truth and tells him about the Daleks. It's an incredible story, but Frank finds himself believing the odd stranger. The Doctor likes Frank and is impressed by his open-mindedness. He

offers to take him back in time to see the siege of Troy, but Frank declines. He says that if he were ever to travel back in time, he would prefer to go back to meet his wife Sandra much earlier than they did – they never met when they were both at Durham University. The Doctor says that that would be bending the rules. Frank accepts this and leaves with the gunstick.

Rose and Kate arrive at the dig. Kate is instantly drawn to the Dalek casing. She extends her fingers into it, and glowing

green filaments flow into the Dalek. Horrified, the Doctor shoves Kate away. He theorises that one of Kate's ancestors could have been imprinted with the Dalek Factor, which has been passed down through the generations to her. "Something triggered it off today, so she gets strength, intelligence, the power to heal herself," he says. The Doctor tells Rose to get Kate as far away from the Dalek as she possibly can. Rose takes the confused woman out of the dig, putting distance between her and the dormant Dalek.

Opening up the Dalek casing, the Doctor finds a young Dalek mutant growing inside. Realising it is not dead, he runs for the lift leading out of the excavation as the Dalek begins to stir. The Dalek launches into the lift shaft, attaching its plunger to the lift's base. It starts to pull the lift back down. The Doctor leaps onto the lift's roof and hauls himself up the cable towards the surface.

Flats are being built above the bunker. The Doctor finds police officers and students there. He tries to make them leave, but they fail to see the danger the Dalek poses. The Dalek seizes a student and breaks his neck. It then lifts a police car and hurls it at the entrance to the construction site. The car explodes, sealing off the humans' escape route. The Doctor distracts the Dalek by revealing his identity. It ignores the humans and chases him.

Rose and Kate hitch a ride in a lorry bound for Dover. Kate looks at the

people in the other vehicles, suddenly finding them all ugly and inferior. Rose tries to get Kate to talk about her life. Kate mentions her ex-boyfriend, Toby. "I went out with an inferior," Kate says. "He spent my money. Because of Toby, I used all the credit on my card. I will find and exterminate Toby." Kate suddenly grabs the wheel of the lorry. Rose struggles with her. The lorry grinds to a halt on a grass verge near a high street. Kate jumps out. Rose tries to stop her, but Kate easily knocks her aside. They are now in a small town called Twyford where Kate walks towards a market.

The Doctor hides inside the cab of a crane on the construction site, waiting for the Dalek to come around a corner of the unfinished flats. It appears, and he throws a brick at its eyepiece, damaging it. With the Dalek momentarily confused, the Doctor sends the crane's wrecking ball flying into the Dalek's midsection. It is knocked off a cliff and into the sea below. It lies in the shallow water, unable to move. The Doctor climbs down and forces open the Dalek's dome, using the sonic screwdriver to attack its life-support system. There is an explosion, the Dalek screams, and the Doctor is hurled into the sea. He blacks out.

Kate walks through Twyford market, disgusted by all the humans she sees. She encounters Serena, her boss from the call centre. Serena tells Kate that she is fired for not coming into work, but her diatribe is cut short when Kate grabs her by the throat. Rose manages to get Kate to release her. Kate sinks to her knees and begs Rose for help.

The Doctor wakes up floating in the sea. He sees that the Dalek is gone. He realises that its casing repelled him and took energy from his sonic screwdriver. It will now be fully formed. He knows where it will be heading. "Frank, I'm so sorry," he says.

Frank is travelling back home to his wife. His train is halted by the Dalek. It enters his carriage and demands the return of its weapon. Frank is forced to comply. The Dalek kills Frank and then all the other passengers, screaming "Exterminate!"

Police arrive at Twyford to arrest Kate. Rose is horrified when the Dalek appears, flying down the high street, killing everyone

in its path. "Where is the one called Kate?" it demands. The Dalek Factor programming in Kate's mind reasserts itself, and she steps forward. She tells the Dalek that Rose is a companion of the Doctor. The Dalek trains its gunstick on Rose and fires, but the TARDIS materialises in front of Rose and saves her.

The Doctor steps out of his ship. He knows the Dalek won't shoot him – its data store is badly outdated, and it wants the information in his mind. The Doctor demands some answers first. "The Dalek Factor was triggered when this casing was disturbed by the humans digging," the Dalek explains. Kate is one of only a handful of humans in the world with the dormant Dalek Factor gene.

The Dalek offers the Doctor a deal: if he sends it to a new time/space location, it will spare Earth's population. "In a crisis, impure creatures care only for the ones they know," the Dalek tells Rose. "This is a weakness. The Doctor will not allow me to destroy your planet, to kill your family." Rose is shocked when the Doctor agrees to the Dalek's terms.

The Doctor finds an old Time Ring in the TARDIS and repairs it. Kate takes the ring and sets the coordinates for the Dalek: Earth in the year 500 million. Rose begs Kate to resist the Dalek Factor, asking her questions about the small things in her life: the number of the bus she catches every day, what she had for tea last night. It starts to work. The Doctor talks to Kate about the heroism of humanity. Kate's human side overcomes the Dalek Factor, and she sets the Time Ring to self-destruct. The Doctor pulls Kate and Rose into the TARDIS just before the Dalek implodes.

The Doctor is ecstatic over Kate's triumph, but she is simply exhausted. Her hair has returned to red curls. Rose suggests that the Doctor get rid of Kate's credit card debt, and he does so. They drop her back home.

Durham University, 1970. A young Frank Openshaw sees a beautiful student walking by. A blonde girl on a bicycle suddenly knocks him over. The student, named Sandra, helps Frank up. They walk off together.

Rose wheels the bike to the TARDIS and asks the Doctor why he wanted her to do that. "Bending the rules," the Doctor says. "For my friend."

DALEK TECHNOLOGY

A Dalek's armoured casing is an exceptionally self-sufficient travel device, capable of traversing almost any type of terrain and atmosphere. Even so, Daleks have often supplemented their armour by using small vehicles. These can provide them with greater range and firepower without taxing their personal energy supplies.

HOVERBOUT

All Daleks now operate with highly sophisticated anti-gravity emitters that circle the bases of their casings. These enable them to fly at tremendous speeds and manoeuvre with surprising agility. This was not always the case, however. Before the Daleks attained the power of sustained flight over long periods, they relied on a separate vehicle: the Hoverbout. They were used extensively in the early years of the first Dalek invasion of the outer galaxies, both inside planetary atmospheres and

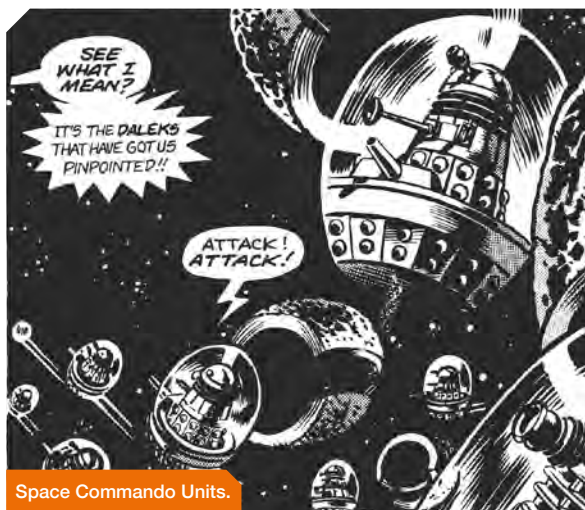

in the vacuum of space. The Hoverbouts were powered by endo-fusion engines and could achieve speeds of up to 600 mph in a standard atmosphere and up to 5,000 mph in space. The Dalek accessed all of the Hoverbout's guidance systems through its base, allowing it to use its manipulator arm for other purposes while in flight. The Hoverbout was wide enough to carry passengers alongside the Dalek pilot, usually captives.

AQUA-DALEK

While Daleks have always been able to travel through liquid environments, their shape is not ideal for aquatic travel. The more streamlined Aqua-Dalek carriers are a far more efficient way means of underwater transportation. Their shells are composed of a transparent multi-polymer plastoid substance. The shells can resist water pressures of up to 5,000 pounds per square inch and are also highly resistant

to both energy weapons and projectiles. They can reach speeds of up to 500 knots in a standard aquatic environment. Daleks cannot fire their personal weapons through the shells, which can be a source of anxiety for them. To compensate, two powerful ionic cannons are mounted at the base of each Aqua-Dalek.

Space Commando Units.

Shuttle Craft.

AQUA-GLIDER

The faction of Daleks on Skaro that had received the Human Factor from the Doctor was believed to have been destroyed by forces loyal to the Emperor Dalek. The Doctor later learned that this was not the case during a visit to the water planet Kyrol. The humanised Daleks had adapted to life underwater and used Aqua-Gliders for easy mobility. The gliders were powered by small neutronic generators and could travel at speeds of up to 50 knots. They carried no armaments. They were controlled by an attachment that fitted over a Dalek's manipulator arm, allowing the Dalek to access the glider's operating systems.

DALEK SPACE-COMMANDO UNIT

These craft were used for missions that required Daleks to operate in outer space for extended periods. They were constructed of a transparent multi-phase alloy that protected them from extreme heat and cold. An ionic cannon was positioned at their bases. The SCU were also equipped with sensor hemispheres at their bases to detect approaching spacecraft and other signs of life. They could be fitted with additional camouflage casings that disguised them as natural space formations, such as meteoroids. Daleks could be concealed within asteroid belts or left to orbit planets for decades, acting as reconnaissance agents.

BATTLE POD

These small fighter craft were developed during the Daleks' Time War with the Gallifreyans. Manned by three Daleks, the Battle Pod was a highly sophisticated vessel capable of flying through a vacuum, any form of planetary

atmosphere, and even underwater. Powered by twin endomorphic engines, its top speed was 10,000 mph in outer space and 3000 mph within an atmosphere. The turret was a rotating cannon that discharged both beams and individual bolts of exotronic energy. Fully charged, a beam could slice through the hulls of most Gallifreyan pursuit ships at close range. Each Battle Pod carried a payload of 500 bombs. They were small by Earth standards, but each had a devastating capacity. There were several varieties to choose from: high-density radion charges that could destroy armour plating up to five inches thick; pulse bombs that could neutralise force-fields; and bio-genetic viruses that could dissolve flesh and also inhibit regeneration in Time Lords.

SHUTTLE CRAFT

Daleks have the same difficulty entering planetary atmospheres as all lifeforms. While their casings can usually withstand the heat of a planet-fall, they see it as an unnecessary waste of energy and resources. They find it simpler and easier to use small shuttle craft when landing on an alien world. This particular model

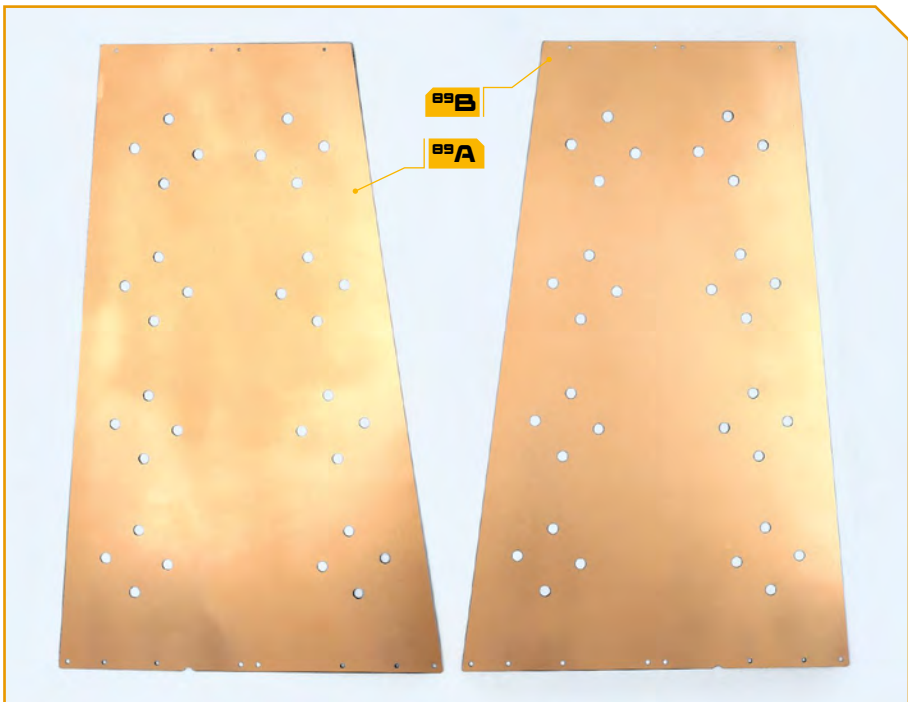

was used in the Shoreditch Incident of 1963, when Imperial Daleks were sent to London to secure the Hand of Omega. The shuttle could carry four Daleks plus a pilot. It had several neutronic pulse weapons positioned at its base to protect Daleks as they exited the ship. The shuttle was a rare example of poor Dalek design in two areas: the upper hull was unprotected, allowing the vessel to be penetrated from above with relative ease. Also, the pilot Dalek was physically integrated into the shuttle's control system and could not disengage from them in the event of an enemy boarding.

Battle Pod.

HANDY HINT

Note the difference in the spacing and positioning of the screw holes and notches in the lower edges of parts **89A** and **89B**. In this photo, the screw holes are circled in red and the positions of the notches are indicated with a blue arrow.

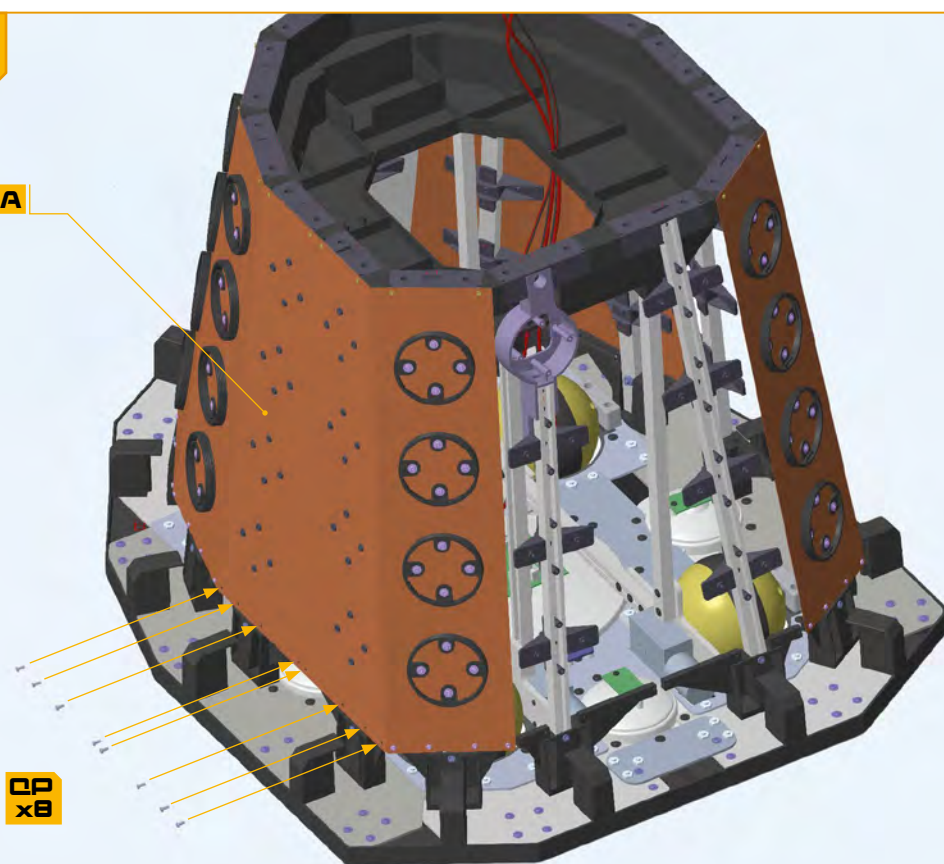

#89-01

Fit panel **89A** on the left-hand side of the model, over the two side supports **77A** and **77B** (D1 and E1). Position it with the gold side facing outward, ensuring that the raised screw sockets on the skirt fixing parts pass through the holes in the panel **89A**. The lower end of the panel should rest against the skirt holders **43C** and **43B**. Secure the top of the panel in place with four **NP** screws supplied with issue 80, as indicated.

2

89A

QP
x8

#89-02

Fix the lower end of panel **89A** to skirt holders **43C** and **43B** using eight **QP** screws, supplied with issue 80.

#89-03

Fit panel **89B** on the right-hand side of the model, over the two side supports **76A** and **76B** (D2 and E2). Position it with the gold side outward, ensuring that the raised screw sockets on the

skirt fixing parts pass through the holes panel **89B**. The lower end of the panel should rest against the skirt holders **44C** and **44B**. Secure the top of the panel in place with four **NP** screws supplied with issue 80, as indicated.
